BILATERAL MEETINGS

Wednesday 10:00 - 16:00

DESCRIPTION We run the first PET-bottle to bottle-plant for food suitable regranulate in Austria and are one of the leading companies in PET-recycling-technology in Europe. The PET-bottles come from the Austrian public collection system. The flakes are used in the plastic industry for fibres, sheets, bottles... Since 2008 we convert various plastics and scraps to a high-quality grinding material in our new factory. We also offer virgin material. Materials in former times considered as waste are nowadays important raw materials. The waste is converted into high-quality grinding or reprocessed material. This material is used in the plastic industry in order to close the circle again.

The company will implement meetings individually after the event

Smo eno vodilnih podjetij v tehnologiji recikliranja PET steklenic v Evropi. PET steklenice izvirajo iz avstrijskega javnega zbiralnega sistema. Kosmiči se uporabljajo v plastični industriji za vlakna, folije, steklenice ...

Od leta 2008 predelujemo različne plastike in ostanke v kakovostno mletje v naši novi tovarni. Nudimo tudi nove surovine. Nekateri materiali, ki so v preteklosti veljali za odpadke, so danes pomembne surovine. Odpadki se pretvorijo v kakovostno mletje ali predelan material, ki se uporablja v plastični industriji.
